Subject: RE: NOW and RWM Restriction Maps

Thanks (b) (6) and (b) (6) -

These features will be considered karst features until such time when the farm and county are able to do additional verification work.

Subject: NOW and RWM Restriction Maps

Hello,

On July 27, 2010 a complaint was reported to the DNR. In response to the complaint, I went out to the site and took pictures of the reported karst features.

I personally found no evidence of sinkholes or karst features, and have photos to support my findings, which will be in the NMP when resubmitted next year. These appear to be old field boundaries, that have ended up receiving more stones and junk over the years before being operated by (b) (6) Farms Inc. In conversations with Kewaunee LCD, to declassify this from their GIS system, this needs to be reviewed by a LCD official after the rock piles are cleaned up showing that the areas are not a threat to ground water. (b) (6) Farms does not have a timeline to clean up these rock piles.

These areas were left as potential groundwater hazards. In response to the complaint, a new restriction map has been created and revised. Please see the attached restriction map.
